

Optimise your crop storage with Knollands

- **Optimal ventilation for grain, potatoes and oil seed rape**
- **Ultra-durable material outperforms steel and twin wall systems**
- **Horizontal and vertical options to suit your needs**

AirFlo

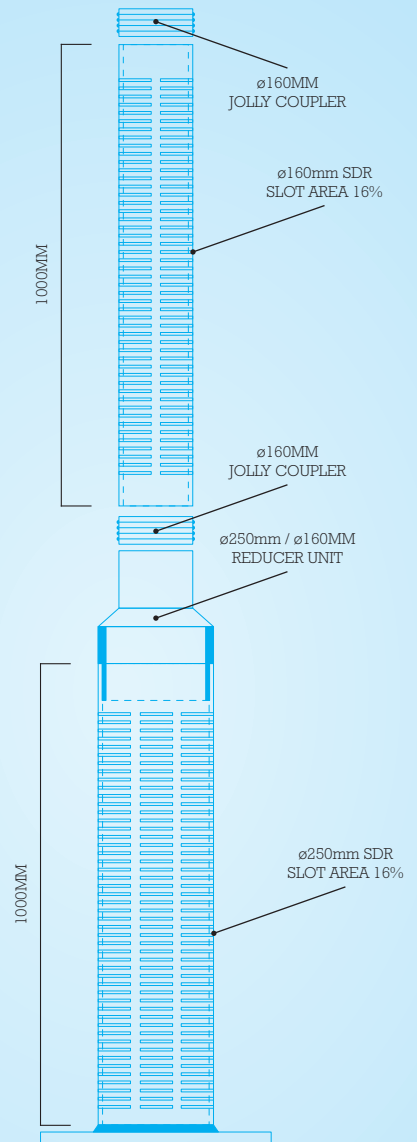

Kollands **AirFlo** system is one of the most effective ways of drying and cooling crops. In hot weather the **AirFlo** system keeps the grain cool and the when the weather is damp it can control and improve the crop.

With a higher slot area that some systems lack and strength that outperforms steel, **AirFlo** sets itself apart from the competition. And with options to form vertical pedestals or horizontal ducting, Knollands **AirFlo** is the new generation of crop ventilation systems.

- **Less condensation than steel systems**
- **Last a lifetime**
- **0.96% density**
- **Chemical resistant**
- **Elephant-duty also available for heavy crops like potatoes**
- **Pipe outside dimensions available 110mm, 180mm, 250mm, 315mm, 450mm**
- **Three different strengths of pipe available**
- **Three different slot widths available 3mm, 4mm and 6mm**
